tangent

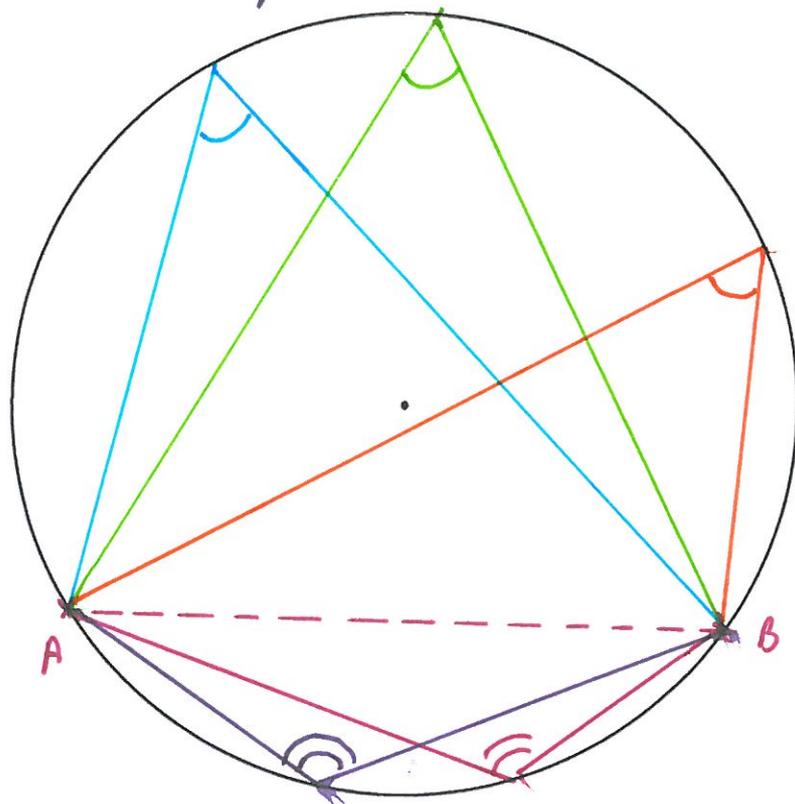

Tangent  
Sector

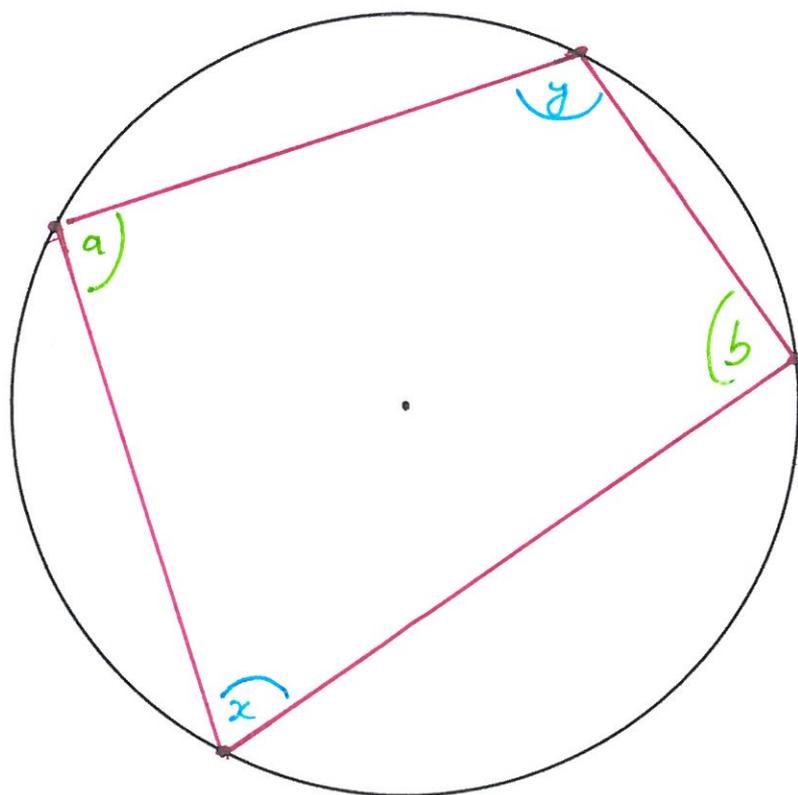

① The angle subtended at the centre of a circle is twice the angle subtended at the circumference.

② Angles subtended by an arc in the same segment of a circle are equal

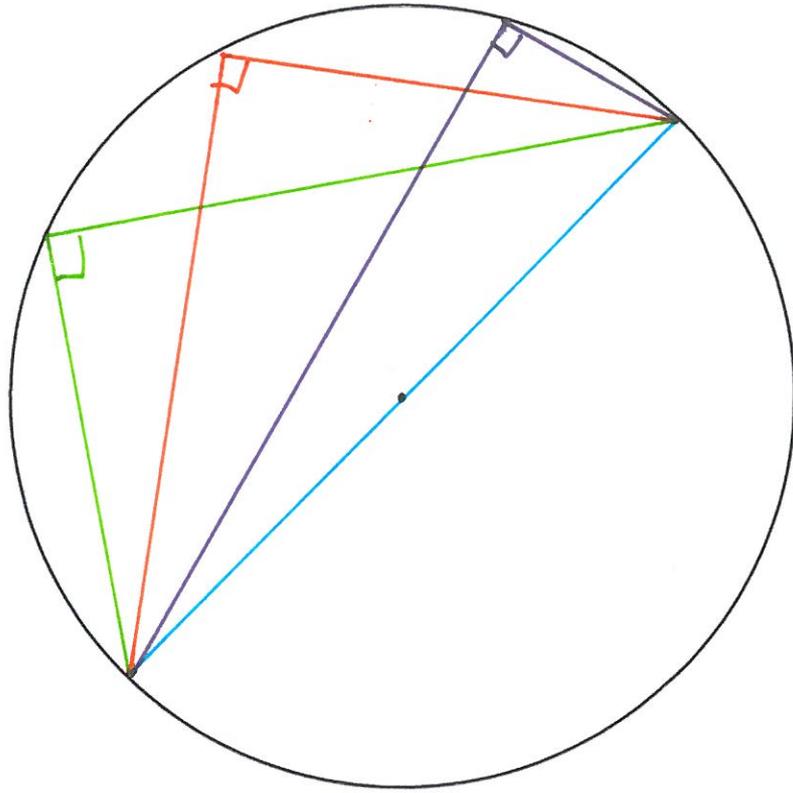

③ Opposite angles in a cyclic quadrilateral add up to  $180^\circ$

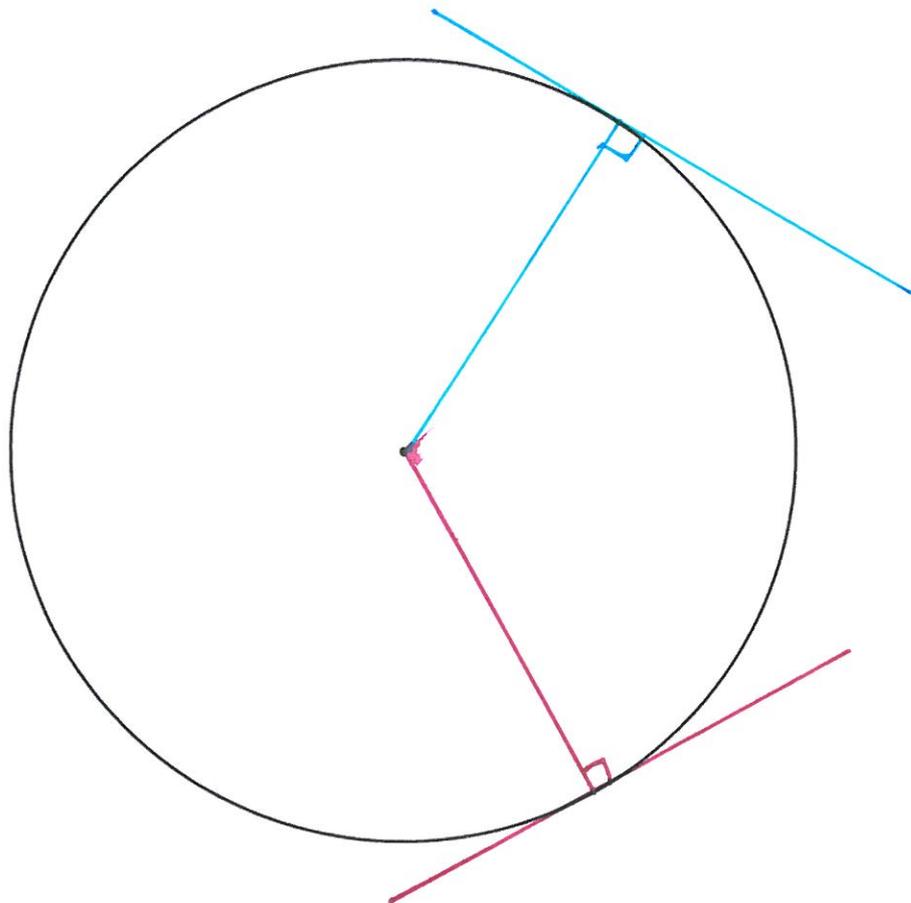

$$x + y = 180^\circ$$
$$a + b = 180^\circ$$

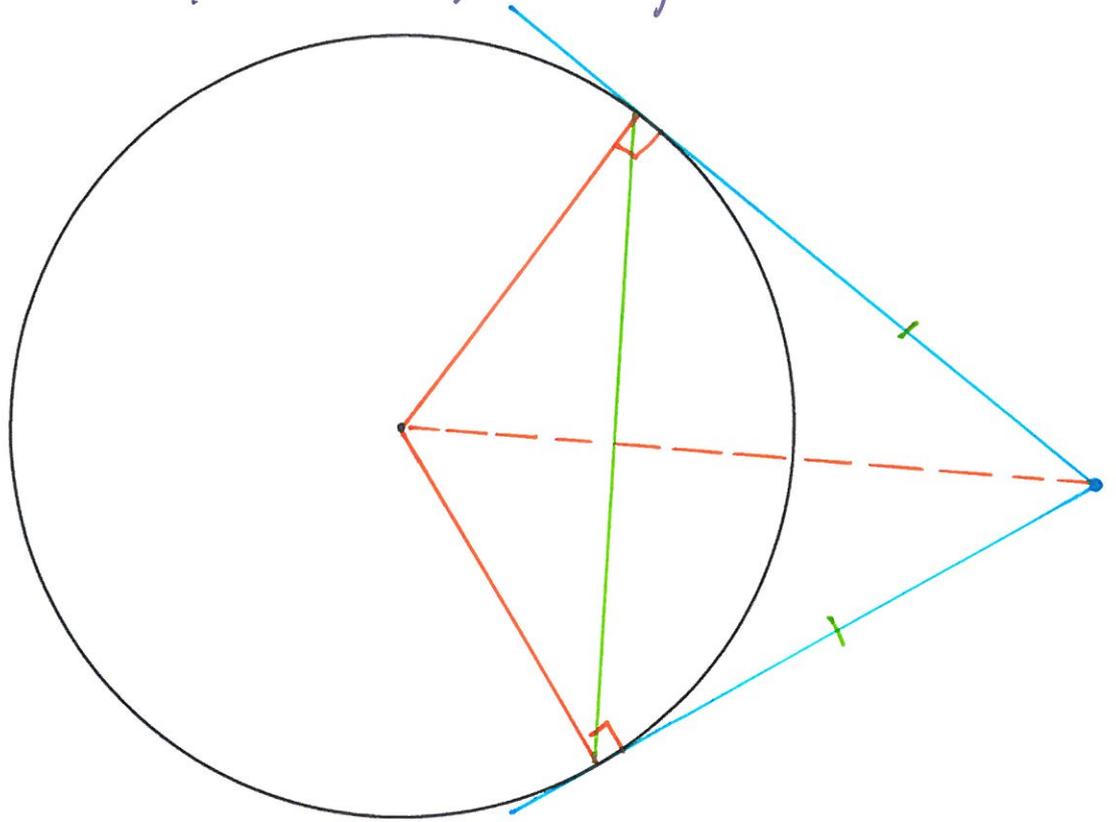

(4) The angle in a semi-circle is a right angle

(5) The angle between a tangent and the radius drawn to the point of contact is  $90^\circ$

- (6) From any point outside a circle, just two tangents may be drawn and they are of equal length.

- (7) Alternate Segment Theorem: The angle between a tangent and a chord through the point of contact is equal to the angle subtended by the chord in the alternate segment.
